Commissioner:

In support of the Pre-Appeal Brief Request for Review submitted herewith, the Applicant requests review for the following reasons:

I. The Examiner has committed a clear error in failing to establish that the cited references, U.S. Patent number 6,005,945 issued to Whitehouse ("Whitehouse") in view of U.S. Patent Application publication number 2005/0114712 by Devine et al ("Devine") teach or suggest each of the elements of the claims.

Appln No. 09/690,243
Dated November 3, 2005

II. The Examiner has committed a clear error in failing to establish a motivation to combine Whitehouse and Devine.

ARGUMENTS

I. Failure to Teach or Suggest each of the Elements of the Claims

The Examiner has rejected claims 1-79 as obvious over Whitehouse in view Devine under 35 U.S.C. § 103.

To establish a *prima facie* case of obviousness, the Patent Office must show that the cited references teach or suggest each of the elements of a claim. With regard to independent claim 1, this claim includes the elements of "a stateless cryptographic module for authenticating the one or more users" and "wherein each security device transaction data can be processed in the server system in a stateless manner." Similarly, independent claim 39 includes the elements of "wherein each security device transaction data can be processed in the server system in a stateless manner." The Examiner cites the same sections of Devine as teaching this element of claim 39 as relied upon for teaching a stateless cryptographic module in claim 1.

The Examiner admits that Whitehouse does not teach these elements of the claim. Rather, the Examiner relies on Devine for teaching these elements. The Applicant has reviewed the cited sections of Devine but has been unable to discern any part therein that teaches or suggests these elements of the claims. Rather, the cited sections of Devine disclose that the Internet and HTTPS are stateless. See the Abstract and paragraph 140 of Devine. Thus, the Examiner has failed to establish that Devine

teaches or suggests a "stateless cryptographic module" or "wherein each security device transaction data can be processed in the server system in a stateless manner."

Further, claim 39 includes the elements of a "scalable cryptographic module." The Examiner has failed to even allege that either of the cited references teach or suggest this element of claim 39. Thus, Applicants believe the Examiner has made a clear error and request that the obviousness rejection of claims 1-72 be reviewed.

II. Improper Combination of References

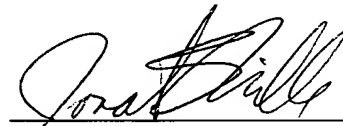

To combine the disclosure of two references the Patent Office must establish that the references suggest the desirability of the claimed invention. See MPEP § 2143.01. The Examiner in Paper number 8, argues that one of ordinary skill in the art would have been motivated to modify Whitehouse "to include Devine et al's a stateless (sic) cryptographic module for authenticating the one or more users because this would have enhance (sic) the security of the system." As discussed above, Devine does not teach or suggest a stateless cryptographic module. Rather, Devine discloses the use of a stateless communication link in the form of the Internet or the use of the HTTPS protocol. The Examiner does not set forth any explanation of how the use of a stateless communication protocol enhances the security of the system of Whitehouse. Whitehouse discloses a system that is already designed to be secure and "securely transmits the generated digital postage indicium to the requesting end user." See Abstract of Whitehouse. Thus, one of

ordinary skill in the art would not think to combine the communication protocol of Devine with the system of Whitehouse as it provides no advantage to that system. Therefore, the Examiner has failed to establish any motivation to combine Devine with Whitehouse. Accordingly, Applicants believe the Examiner has made a clear error and request that the obviousness rejection of claims 1-72 be reviewed.
